### MOBILE NETWORK QUALITY MONITORING SYSTEM

Monitoring the network performance of a mobile phone is a difficult task. By using Centra-SD, the task can be simple and efficient. Centra-SD will consolidate the data into a single server, and display the performance in an intuitive UI. On additional to that, it can manage test devices remotely, collect data from test devices and display the data in a map, thus making analysis easier.

#### Automation

Automation is the key component for effective and efficient monitoring of a cellular network. Centra-SD can schedule any number of test (FTP/HTTP/Voice/etc) to run on any number of devices in the field in real time. Those devices will immediately begin to automatically collect and upload data. With Centra-SD, controlling and collecting extensive amounts of data becomes simple.

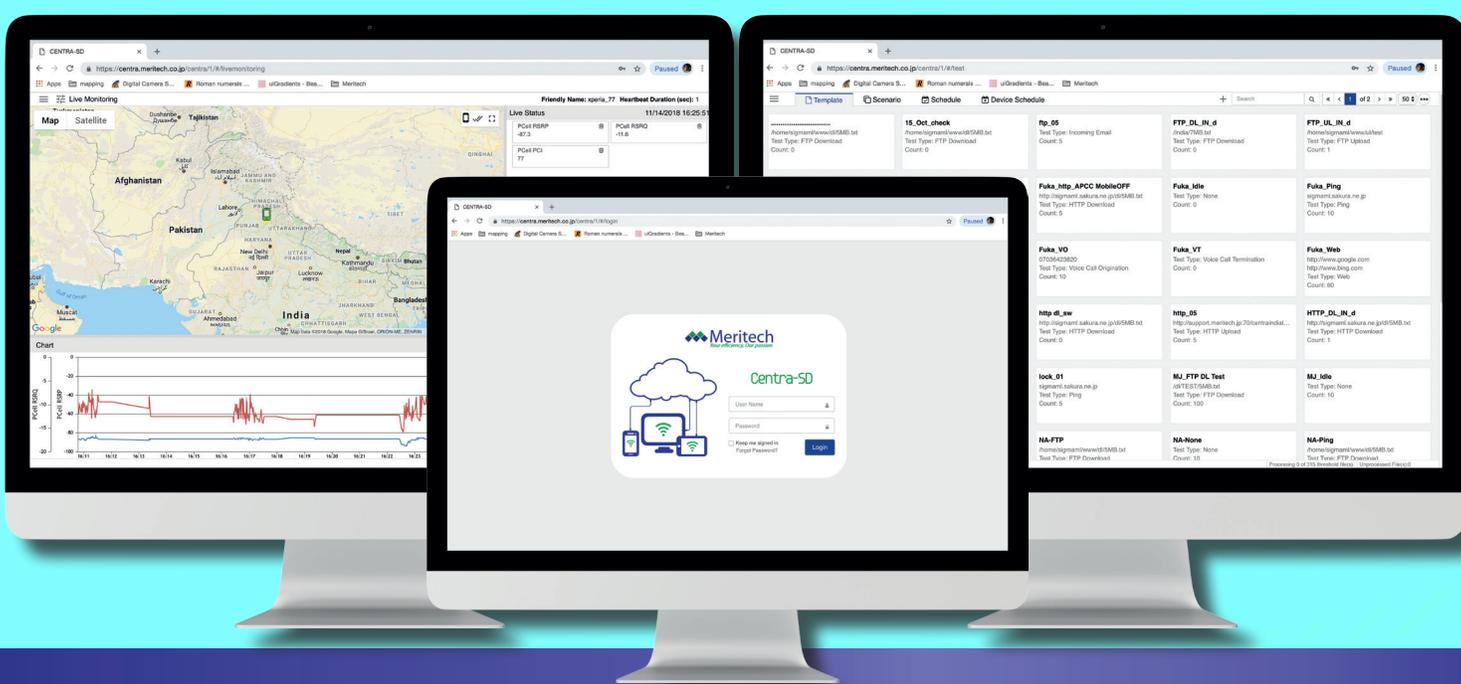

#### Easy To Use

Access Centra-SD from anywhere in the world over the internet with any standard browser. The intuitive UI allows quick access to a number of KPIs that can be filtered, viewed and drilled down into. With Centra-SD, finding bottlenecks and trouble spots becomes simple.

#### Remote Management

Manage all the test devices online without leaving your web browser. The ability to create groups of devices makes management of multiple devices trivial. Test schedules are easily created, assigned and pushed to field devices through the UI. The status of the test devices is also tracked and viewable, offering an easy overview of a test network at a glance. With Centra-SD, maintaining and controlling an extensive testing network becomes simple.

## FUNCTIONS

- Remotely schedule and monitor test devices.
- Explore KPI data through an interactive interface.
- Export data in a number of industry standard formats.

## FEATURES

- Control an unlimited number of test devices.
- Create test schedules with only a few clicks.
- Assign schedules to test devices in real-time using push technology.
- Automatically upload data to a central repository.
- Filter data with a number of criteria for a bird's eye view of the network performance.

## ADVANTAGES

- Quickly find problem areas in the network using Centra's interactive bird's eye view.
- One click export allows for detailed analysis in Sigma-PA.
- A single central location for controlling and monitoring all test UEs.
- Easily retrieve data from the uploaded files for having a historical performance analysis.
- Customizable screen layout for ultimate user control and comfort.
